

San Gabriel Valley Mosquito & Vector Control District – Service Area

The mosquito life cycle

It takes only 5 days!

West Nile Virus Risk is Real...

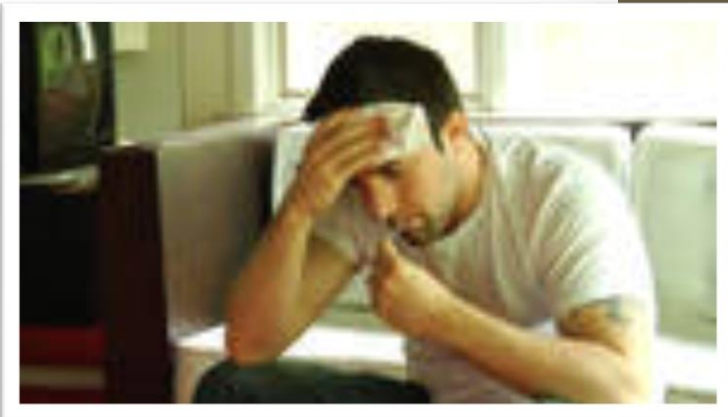

You could become ill if bitten by an infected mosquito

1 in 4 will develop symptoms:

- Headache
- High fever
- Extreme fatigue
- Muscle aches
- Rash
- Nausea

1 in 150 become severely ill:

- Encephalitis
- Meningitis
- Paralysis
- Coma
- Death

West Nile Virus Risk is Real...

Even people with the 'milder' form of WNV infection can be hospitalized and report symptoms lasting 30 days or longer

People over 50 & those with suppressed immune systems are at highest risk for more severe illness

Invasive Species Alert

Asian Tiger Mosquito (*Ae. albopictus*)

- Tiny - ¼ inch mosquito
